

Use case: Company Registration

Develop an User interface to capture the company details specified below, in a stepped manner.

Step 1 (Basic Info):

- Company Name
- Description
- Address:
 - Building No, Location, City, State, PIN code.
- Company Type: Private Ltd, Public Ltd.
- Established On: Date (calendar)

Step 2 (Directors):

- Person Name:
- Qualification:
- Date Of Birth:
- Resume (file):
- Address
 - Building No, Location, City, State, PIN code.

Step 3 (Review & Submit):

- << Display all the information from step 1 and 2 in a non-editable manner>>
- Submit button
- Onclick of submit button, display the whole information of step 1 and step 2 (JSON format string) in a modal window.
- User shall be able to navigate between the steps in both the directions.

Note:

- No server side/backend interaction needed.
- UI screens shall be pleasant and look good for the user to use the application.
- It is up to the you to add any additional/meaningful functionality/feature to demonstrate your skills.
- Consider all the best practices you follow while developing a maintainable application.

Technology to be used:

- Angular 2+ (preferred Angular Latest version 5+)
- CSS3
- Bootstrap 4

Submission:

- Source Code can shared with a github url
- .Zip file with readme.txt on how to use it.
- Code shall be in runnable, executable manner. (we shall be able to run it locally and see if it works)
